Music Store SQL Analysis Project

Welcome to the Music Store SQL Analysis Project! In this project, we dive into the fascinating world of music data analysis using SQL. We explore a music store dataset, uncovering insights and answering intriguing questions about the music industry.

Project Overview

The project involves analyzing a music store dataset to gain insights into various aspects of the music industry. We use SQL queries to answer specific questions and extract meaningful information from the dataset.

Dataset

The dataset used in this project contains information about the music store's inventory, customers, employees, sales transactions, and more. It provides a comprehensive view of the store's operations and customer behavior.

Files Included

- `music_store_data.sql`: SQL script containing the dataset and queries used in the analysis.
- `README.md`: This file, providing an overview of the project and instructions for usage.

Usage

To run the analysis:

1. Ensure you have access to a SQL database management system (e.g., MySQL, PostgreSQL).

2. Execute the SQL script `music_store_data.sql` in your SQL environment.

3. Run the SQL queries to explore the dataset and answer the questions listed above.
